Delivering technology enabled business solutions & services

The Company

Background

Extrapolix Systems Private Limited was incorporated in 1999 with the goal of providing **TOTAL SOLUTION** in terms of Information Technology, TQM & Management Consulting in the domestic and global market. Since 1990 Extrapolix was operating in the name of Macro Services, a software development house, providing cost effective software solutions to only domestic clients. Keeping in line with the growing global demand for software services, EXTRAPOLIX SYSTEMS Private Limited has been incorporated to address to a global clientele.

Experience

Few companies have the experience and breadth of domain knowledge that Extrapolix has accumulated in its 21 years of operation. We have served over 200 clients spanning across 20+ industry groups. When it comes to domain knowledge, reliability, affordability and professionalism, Extrapolix is a leader in software development, consulting and outsourced services. We aim at providing cost effective high quality solutions and services to our clients with time bound commitment to deliver a high ROI. Our collective experience of more than 150 man years in consulting and executing various outsourced services enables us to deliver efficient solutions & services to our clients.

Resource

We, at Extrapolix Systems, understand that the key resource for any successful company is its people. A successful enterprise continually transforms the multitude of changes occurring around it into coordinated strategic actions by its people to further the improvement of its products and services. At Extrapolix, we have a battery of dedicated and quality oriented professionals. This enables us to complete projects in time while remaining cost effective and nimble enough to adapt to changing technology and associated skill requirements.

Reliability

Most of our customers have remained as loyal customers over the years. They have recognized the value they receive from our services, the reliability of the services delivered to them and the strict adherence to deadlines that ensures that their business development blueprint is never jeopardized.

Services We Offer

Application Development

Development of a business application system from concept stage to deployment, using an iterative development process is our expertise. Our business process experts and software architects work together to design, develop, and implement custom applications that meet clients' individual requirements. We blend new technology with elements of clients' existing environments to optimize their investments while taking advantage of technological advancements and providing enhanced functionality and reliability. We have already implemented and integrated systems for more than 20 industry segments.

We help clients design, evaluate, and implement integrated information technology systems, including hardware, software, and networking. We install, configure, and test new systems and migrate clients' systems to new platforms. Effective knowledge transfer enables our clients' personnel to effectively manage and maintain the new technology and processes that are implemented.

"Easy to learn" and "Easy to use" is what we want to hear from our clients. We believe our clients' time and energy should be focused towards serving their customers not their computers.

Web Design

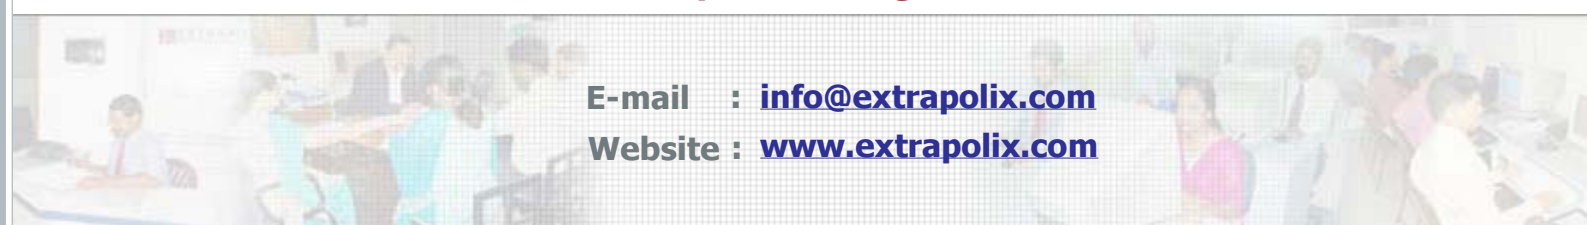

We take websites from a concept to complete design, development and implementation. Our site development services include:

- Theme design
- Navigation structure design
- Database integration
- Server side programming
- Client side scripting
- Blog and CMS integration

Our team of full-time professional developers work in tandem to deliver completed sites in record time. All sites are exhaustively tested by our testing staff before it's handed over to the customers.

We understand that a fully functional website plays a critical role in the client's business. We make sure that our finished product meets the business objectives of the client. Our objective is to make it easy for our customers to focus on core business activities while the outsourced site development is finished to complete satisfaction.

Services We Offer

Web Enablement

We offer - Extending an existing client/server or legacy application to the web by providing web-based functionality for querying, transaction-enabling or integrating with back-end applications, using an evolved iterative process.

Web enabling client-server or legacy application is done to enhance the reach and usefulness of time tested business critical applications that are built in non-web technology. Web enablement is done with minimal changes to the stable application code. In most cases, web enablement would be a mere enhancement whereby the application in its previous form would continue to be fully functional, sharing the same application data.

Typically, application interface is reengineered maintaining the business logic intact. This may need minor structural adjustments to separate the functionality into appropriate tiers. Conversion of user interface screens / forms into web pages is done. Web graphics and static content is designed and merged with user interface controls to provide native web look and feel. These will be deployed in web servers. In large applications, selective features are prioritized and reengineered to meet time to market requirements.

Multimedia Development

We develop multimedia presentations to help our Client's business communicate the right information to the right people at the right time.

Animation, video, music, narration, text, and graphics all thrive in a CD-ROM environment. Our Multimedia Development services guide Client's idea from concept to delivery, allowing the Client to take advantage of the information distribution and interactive capabilities only CD-ROM can offer.

Our staff has expertise in planning, designing, and producing multimedia projects in a variety of subjects and industries. Our services include conversion of text-based information to electronic format, and re-purposing of existing digital data.
